## DETAILED ACTION

### *Claim Rejections - 35 USC § 101*

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-14 are rejected under 35 U.S.C. 101 because they merely manipulate an abstract idea without a claimed limitation to a practical application. The disclosed invention has a practical application in the technological arts (e.g fixed codebook searching methods); however, the claimed method, a series of steps to be performed on a computer, simply manipulates an abstract idea without a claimed limitation to the practical application, where practical application may be shown by

a) physical transformation

OR

b) useful, concrete and tangible result.

The disclosed invention of the instant application pertains to a method of fixed codebook searching, which is a manipulation of an abstract idea without any limitation to a practical application.

### *Specification*

3. The disclosure is objected to because of the following informalities: all the variables used in various equations in the specification are not completely identified and/or defined. (variable

"d" is not defined in Equations 1, 2, and 4; variables "d", "b", and "M" are not defined for Equations 6 and 7).

Appropriate correction is required.

4. Claims 5 and 9 are objected to because of the following informalities: all variables used in the equations of claims 5 and 9 are not properly identified and/or defined (variables "m" and "d" are not defined in the Equation of claim 5 and variable "d" is not defined in the Equation of claim 9). Appropriate correction is required.

#### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Davidson (US Patent No. 4,868,867)

Gao (US Patent No. 6,173,257).
